Preface	v
1 A Survey of the Solar System	1
1.1 Overview	1
1.2 An inventory of the solar system	3
1.3 Planetary sizes, separations, and motions	11
1.4 Gravitation	24
1.5 Tides	27
1.6 Mathematical aspects	29
1.7 References	32
1.8 Review questions	33
1.9 Problems	33
2 Matter and its Atomic Structure	37
2.1 Overview	37
2.2 Atomic nature of matter	37
2.3 States of matter	47
2.4 Chemical bonds	54
2.5 Minerals	57
2.6 Rocks	60
2.7 Mathematical aspects	63
2.8 References	65
2.9 Review questions	65
2.10 Problems	66
3 The Sun and the Astronomical Environment	69
3.1 Overview	69
3.2 The Milky Way galaxy	69
3.3 Structure of main sequence stars	72
3.4 Stellar evolution and the synthesis of heavy elements	76
3.5 The star in the solar system: the Sun	80
3.6 Mathematical aspects	90
3.7 References	96
3.8 Review questions	96
3.9 Problems	97
4 Formation of Stars and Planetary Systems	99
4.1 Introduction	99
4.2 How star formation occurs	99
4.3 Formation of planetary systems	103
4.4 Formation of planetary bodies	105
4.5 Detection of planet systems around other stars	107
4.6 Mathematical aspects	109

4.7 References	113
4.8 Review questions	113
4.9 Problems	114
5 Meteors, Impacts, and Meteorites	117
5.1 Overview	117
5.2 Collisions of the Earth with space debris	118
5.3 Meteors	118
5.4 Impact craters on the Earth	123
5.5 Meteorite types and parent bodies	127
5.6 Chondritic meteorites	128
5.7 Differentiated meteorites	132
5.8 Information about the solar nebula from chondrites	134
5.9 Dating meteorites: the age of the solar system	138
5.10 Mathematical aspects	141
5.11 References	145
5.12 Review questions	146
5.13 Problems	146
6 Asteroids	149
6.1 Overview	149
6.2 Discovery	149
6.3 Orbits	150
6.4 Physical nature of asteroids	153
6.5 Origin and evolution of asteroids	163
6.6 Mathematical aspects	169
6.7 References	174
6.8 Review questions	174
6.9 Problems	175
7 Comets	177
7.1 Overview	177
7.2 Orbital behaviour of comets (and a little history)	178
7.3 Comet nuclei, comas, and tails	180
7.4 Space probes to Comet Halley	190
7.5 Origin and evolution of comets	192
7.6 Mathematical aspects	198
7.7 References	204
7.8 Review questions	205
7.9 Problems	205
8 The Earth	207
8.1 Overview	207
8.2 The interior of the Earth	207
8.3 The dynamic Earth and drifting continents	215
8.4 Origin and early evolution of the Earth	224
8.5 Mathematical aspects	227
8.6 References	230
8.7 Review questions	231
8.8 Problems	231

9 Other Terrestrial Planets	233
9.1 The Earth's Moon	233
9.2 Impacts and craters, again	240
9.3 Mercury	242
9.4 Mars	246
9.5 Venus	256
9.6 The terrestrial planets: a final comparison	262
9.7 Mathematical aspects	263
9.8 References	263
9.9 Review questions	265
9.10 Problems	265
10 Terrestrial Planetary Atmospheres	267
10.1 Overview	267
10.2 Variation of pressure and density with height	269
10.3 The temperature of the atmosphere	270
10.4 Variations of temperature with height	273
10.5 Motions in the atmosphere	275
10.6 The atmosphere of Venus	280
10.7 The atmosphere of Mars	282
10.8 The origin of the atmospheres of the inner planets	285
10.9 Evolution of the terrestrial atmospheres	288
10.10 Mathematical aspects	292
10.11 References	294
10.12 Review questions	295
10.13 Problems	296
11 Giant Planets and their Moons	299
11.1 Overview	299
11.2 The giant planets	300
11.3 Moons of the giant planets	313
11.4 Planetary ring systems	331
11.5 Pluto and Charon	336
11.6 Mathematical aspects	338
11.7 References	340
11.8 Review questions	341
11.9 Problems	342
A Characteristics of planets and moons	345
B Physical and astronomical constants	347
